I. Introduction

A. Index Overview

This document describes the methodology for the following indexes:

- Goldman Sachs ActiveBeta[®] Emerging Markets Equity Index
- Goldman Sachs ActiveBeta[®] Europe Equity Index
- Goldman Sachs ActiveBeta[®] International Equity Index
- Goldman Sachs ActiveBeta[®] Japan Equity Index
- Goldman Sachs ActiveBeta[®] U.S. Large Cap Equity Index
- Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity Index

The Goldman Sachs ActiveBeta[®] Equity Indexes are owned by Goldman Sachs Asset Management (the Index Sponsor) and were developed to capture the performance of diversified exposure to the equity common factors: value, momentum, volatility, and quality.

Using a patented portfolio construction methodology and patent-pending turnover minimization technique, each Index aims to deliver higher returns than a market capitalization-weighted index for the same geographical region at similar or lower levels of total risk, as measured by volatility and drawdown. The Goldman Sachs ActiveBeta[®] Equity Indexes also seek to mitigate the magnitude and duration of potential market underperformance.

B. Index Details

The Goldman Sachs ActiveBeta[®] Equity Indexes are distributed under the following identifiers.

Name	Ticker
Goldman Sachs ActiveBeta [®] Emerging Markets Equity Index (NTR)	GEMNR
Goldman Sachs ActiveBeta [®] Europe Equity Index (NTR)	GSEUNR
Goldman Sachs ActiveBeta [®] International Equity Index (NTR)	GSIENR
Goldman Sachs ActiveBeta [®] Japan Equity Index (NTR)	GSJYNR
Goldman Sachs ActiveBeta [®] U.S. Large Cap Equity Index (TR)	GSLCTR
Goldman Sachs ActiveBeta [®] U.S. Small Cap Equity Index (TR)	GSSCTR

II. Index Construction Methodology

A. Eligible Securities

The eligible securities for each of the Goldman Sachs ActiveBeta® Indexes are defined as the constituents of these corresponding Index Universes.

Goldman Sachs ActiveBeta® Equity Index	Index Universe
Emerging Markets Equity	MSCI Emerging Markets Index
Europe Equity	MSCI Europe Index
International Equity	MSCI World ex USA Index
Japan Equity	MSCI Japan Index
U.S. Large Cap Equity	Solactive US Large Cap Index
U.S. Small Cap Equity	Russell 2000 Index

The Index Universes are adjusted to exclude the stock of Goldman Sachs and any stocks that are traded solely on the Shenzhen or Shanghai exchanges.

More information about the MSCI Indexes is available from www.msциbarra.com, the Solactive Index from www.solactive.com, and the Russell 2000 Index from www.ftserussell.com.

B. Index Construction

The construction of each ActiveBeta® Equity Index involves two steps:

- construct four factor subindexes:
 - ActiveBeta® Value Factor Subindex
 - ActiveBeta® Momentum Factor Subindex
 - ActiveBeta® Quality Factor Subindex
 - ActiveBeta® Low Volatility Factor Subindex
- combine the four subindexes with equal weights to form each ActiveBeta® Equity Index.

1. Constructing the factor subindexes

The ActiveBeta[®] factor subindexes are constructed according to a patented portfolio construction methodology,¹ as described in steps 1.0 through 1.4.

1.0 Assigning a factor score

For each ActiveBeta[®] factor subindex, constituents in the Index Universe are ranked on the basis of a factor score.

The cut-off date for data used in calculating the factor scores is four US trading days prior to the effective rebalance date for the corresponding ActiveBeta[®] Equity index (the Selection Date).

Values are calculated for each factor for every stock in an Index Universe, as described below.

- **Value** – A composite of three valuation measures: book value-to-price, sales-to-price, and free cash flow-to-price. The earnings-to-price ratio is used instead of free cash flow-to-price for financial stocks.
- **Momentum** – Beta- and volatility-adjusted daily total returns over an 11-month period ending one month before the Rebalance Date
- **Quality** – Gross profit divided by total assets, or return on equity for financial stocks or when gross profit is not available
- **Low Volatility** – The inverse of the standard deviation of daily total stock returns over the past 12 months, up to and including the Selection Date.

The values are used to rank the stocks by each factor. Ranks are converted to fractional factor scores ranging from –1 to +1, inclusive.

1.1 Cut-off Score and Maximum Stock Underweight

Two parameters are used in the construction process for each ActiveBeta[®] factor subindex:

- Cut-off Score
- Maximum Stock Underweight

The Cut-off Score determines the proportion of underweights to overweights, and the Maximum Stock Underweight the magnitude of stock weight differences relative to their weights in the Index Universe. The appropriate parameter values for each factor are determined based on historical simulations and are fixed for each ActiveBeta[®] Index.

¹ Methods and Systems for Building and Maintaining Portfolios based on Ordinal Ranks of Securities, U.S. Patent Numbers 8,285,620 and 8,473,398.

1.2 Determining target underweights and overweights

Stocks whose factor scores are above the Cut-off Score are overweighted relative to the Index Universe. Those whose factor score is below the Cut-off Score are underweighted.

Because the index is subject to a long-only constraint, the smallest weight of any stock is zero.

For all stocks and for each factor:

- For factor scores less than the Cut-off Score, rescale the factor scores to range from -1 to 0
- For factor scores greater than or equal to the Cut-off Score, rescale the factor score to range from 0 to +1

Once the factor scores are rescaled, stocks with factor scores greater than 0 are overweighted relative to the Index Universe. Stocks with factor scores less than or equal to 0 are underweighted relative to the Index Universe.

For all stocks and factors with an $RScore_i \leq 0$,

$$TgtWgt_i = \max(IUWgt_i + RScore_i \times MaxUnderWgt, 0)$$

The total of the stock underweights is calculated.

$$TotalUnderWgt = \sum (IUWgt_i - TgtWgt_i)$$

For all stocks and factors with an $RScore_i > 0$, a $TgtWgt_i'$ is determined by proportionately reweighting all constituents such that $TotalUnderWgt = TotalOverWgt$

$$TgtWgt_i' = IUWgt_i + RScore_i / \sum RScore_i \times TotalUnderWgt$$

Any $TgtWgt_i'$ that exceeds 20 times its $IUWgt_i$ is capped at 20 times its $IUWgt_i$, except in the case of the ActiveBeta[®] U.S. Small Cap Equity Index for which $TgtWgt_i'$ is capped at 5 times its $IUWgt_i$.

where,

$RScore_i$ = rescaled factor score for each stock and factor

$TgtWgt_i$ = the target weight of each stock in its factor subindex prior to any capping or turnover minimization

$IUWgt_i$ = the weight of each stock in its Index Universe

$MaxUnderWgt$ = the maximum stock under-weight that applies for each factor subindex

$TotalUnderWgt$ = the sum of all the stock underweights in a factor subindex relative to its Index Universe

$TgtWgt_i$ = the target weight of each stock in its factor subindex prior to any capping or turnover minimization, normalized to ensure that $TotalUnderWgt = TotalOverWgt$

For the ActiveBeta® Low Volatility Factor subindex only, stocks in the Index Universe are reweighted using 50% equal-weight and 50% cap-weight within sectors, countries and/or regions before calculating the overweights and underweights.

1.4 Controlling for country, region, and industry group biases

Weight constraints are applied to control unwanted biases to countries, regions and industry groups, as follows:

- **Value** – Industry group weights within each geographic region are constrained to closely match those of the same region in the Index Universe. Overall weight constraints apply to the exposure of major regions.
- **Momentum** – All country weights are constrained to be within a band around the Index Universe country weights as defined by $\pm 5\% * \frac{\sqrt{\# \text{ stocks in each Country}}}{\text{Max}(\sqrt{\# \text{ stocks in a Country}})}$
- **Quality** – Country weights are constrained to closely match those of the Index Universe. In the case of the ActiveBeta® U.S. Small Cap Equity Index only, industry group weights are constrained to closely match those of the Index Universe.
- **Low Volatility** – Country weights are constrained to closely match those of the Index Universe.

Two additional constraints are applied across each ActiveBeta® Equity Index such that 1) the sum of all stock positions with a weight greater than 5% shall not exceed 25% in aggregate, and 2) the weight of each industry group will be constrained to less than 25%.

2. Combining the ActiveBeta® Factor Indexes

Each Goldman Sachs ActiveBeta® Equity Index is created by equally weighting the four ActiveBeta® factor subindexes constructed for its Index Universe. As part of this combination, offsetting security positions are calculated and netted across the ActiveBeta® factor subindexes.

A minimum weight of 2 bps per stock is applied to constituents of the ActiveBeta® U.S. Large Cap Equity Index, ActiveBeta® International Equity Index, ActiveBeta® Europe Equity Index and ActiveBeta® Japan Equity Index. The minimum weight for constituents of the ActiveBeta® Emerging Markets Equity Index is 10 bps. Constituents whose weight falls below the minimums are eliminated at rebalance.

III. Index Rebalancing

A. Rebalancing Schedule

The ActiveBeta® U.S. Large Cap Equity Index is rebalanced quarterly according to the published rebalancing schedule of their Index Universes, on the close of the first Wednesday of February, May, August, and November or, if that day is a US exchange holiday, the next trading day.

The ActiveBeta® International Equity Index, ActiveBeta® Emerging Market Equity Index, ActiveBeta® Europe Equity Index and ActiveBeta® Japan Equity Index are rebalanced quarterly according to the published rebalancing schedule of their Index Universes, typically on the close of the last business day of February, May, August, and November.

The ActiveBeta® U.S. Small Cap Equity Index is rebalanced quarterly according to the published rebalancing schedule of its Index Universe.

Each ActiveBeta® Equity Index is rebalanced according to the Index Construction Methodology described in Section II, subject to the ActiveBeta® Turnover Minimization Technique², described under III B and C below.

B. Target Weight Buffers

To minimize turnover, buffers are applied to the weights which result from the Index Construction Methodology. Buffers are determined using the following process:

- Each stock is assigned its target weight, $TgtWgt_i$ according to the Index Construction Methodology in Section II.
- A buffer is assigned to a stock relative to each factor index's maximum underweight.

$$Buffer_i = \min(0.20 \times MaxUnderWgt, 0.30\%)$$

The lower and upper trading bounds on constituent i are then defined as:

$$LowerWgt_i = \min(\max(TgtWgt_i - Buffer, 0), MaxWgt_i)$$

$$UpperWgt_i = \min(\max(TgtWgt_i + Buffer, 0), MaxWgt_i)$$

where,

TgtWgt_i = the target weight of each stock in its factor subindex prior to any capping or turnover minimization, normalized to ensure that $TotalUnderWgt = TotalOverWgt$

² Methods and Systems for Reducing Turnover in Multi-Portfolio Structures, U.S. Patent Application Number 14/208,865.

MaxUnderWgt = the maximum stock under-weight that applies for each factor subindex

MaxWgt = 20 x IUWgt_i, except in the case of the ActiveBeta® U.S. Small Cap Equity Index for which it is 5 x IUWgt_i.

IUWgt_i = the weight of each stock in its Index Universe

C. Turnover Minimization

The ActiveBeta® Turnover Minimization Technique reduces the turnover in the ActiveBeta® Equity Indexes by calculating offsetting pair trades in the individual factor subindexes and allowing constituent weights to float inside the upper and lower weight bounds, as defined above.

A trade weight is calculated for each stock from the difference between the stock's weight before rebalancing and the weight determined by the Index Construction Methodology described in Section II. The lower and upper trading bounds allow a stock's weight to deviate from its target weight, either positively or negatively, before a trade or rebalancing is triggered. Iterative pair-wise trades are netted until the minimum amount of trading is determined which maintains each stock within its upper and lower weight bounds. In the case of the ActiveBeta® U.S. Small Cap Equity Index only, the trade size is further constrained as a function of 60 day median trading volume and the market capitalization of the Russell 2000 Index.

IV. Index Calculation and On-going Maintenance

A. Daily Calculation

The indexes are calculated by Solactive AG (the Calculation Agent).

The Index Calculation Agent is responsible for calculating index levels based on weights and stocks as determined by the Index Sponsor on a quarterly basis using the steps described in Section II, Index Construction Methodology, and Section III, Index Rebalancing.

The Index Calculation Agent applies corporate action adjustments and calculates the indexes as described in the the Solactive Index Calculation Guideline, Version 1.1 dated July 8th, 2013 <http://www.solactive.com/wp-content/uploads/2012/06/Index-Calculation-Guideline-Solactive1.pdf>

Both price and total return indexes are calculated for each ActiveBeta[®] Equity Index in US dollars. Total return indexes assume reinvestment of cash dividends across the full index at the open on the ex-date. The total return indexes for the ActiveBeta[®] US Large Cap and US Small Cap Indexes are calculated using gross dividends. The total return indexes for the ActiveBeta[®] International, Emerging Markets, Europe and Japan are calculated using net dividends.

The compositions of the ActiveBeta[®] Equity Indexes are available on the GSAM website (www.gsamfunds.com) and Solactive website (www.solactive.com) on a daily basis. Results of the latest rebalancing are available on the Solactive website three days prior to the effective date (www.solactive.com) and are adjusted for corporate actions between the Selection date and Rebalance dates in accordance with the rules for Daily Calculation.

B. Inception Date & Value

The ActiveBeta[®] Equity Indexes have the following inception dates. Index data prior to the inception dates are based on backtests (pre-inception performance).

Name	Date
Goldman Sachs ActiveBeta [®] Emerging Markets Equity Index (NTR)	8/19/2015
Goldman Sachs ActiveBeta [®] International Equity Index (NTR)	8/19/2015
Goldman Sachs ActiveBeta [®] U.S. Large Cap Equity Index (TR)	8/19/2015
Goldman Sachs ActiveBeta [®] Europe Equity Index (TR)	3/2/2016
Goldman Sachs ActiveBeta [®] Japan Equity Index (TR)	3/2/2016
Goldman Sachs ActiveBeta [®] U.S. Small Cap Equity Index (TR)	6/28/2017

V. Amendments and Exceptions to this Methodology

The Index Committee, comprised of Goldman Sachs Asset Management employees, is responsible for approving changes to the methodology for the Goldman Sachs ActiveBeta[®] Equity Indexes. This document is updated to reflect any changes approved by the Index Committee.

GOLDMAN SACHS ASSET MANAGEMENT, L.P., THE GOLDMAN SACHS GROUP, INC., AND GOLDMAN, SACHS & CO. LLC (collectively, “GOLDMAN SACHS”) DOES NOT GUARANTEE NOR MAKES ANY REPRESENTATION OR WARRANTY, EXPRESS OR IMPLIED, TO THE OWNERS OR SHAREHOLDERS OF THE FUND OR ANY MEMBER OF THE PUBLIC REGARDING THE ADVISABILITY OF INVESTING IN SECURITIES GENERALLY OR IN THE FUND PARTICULARLY OR THE ABILITY OF THE INDEX TO TRACK GENERAL MARKET PERFORMANCE. GOLDMAN SACHS, IN ITS CAPACITY AS THE INDEX PROVIDER OF THE INDEX, LICENSES CERTAIN TRADEMARKS AND TRADE NAMES TO THE FUND. GOLDMAN SACHS HAS NO OBLIGATION TO TAKE THE NEEDS OF THE FUND OR THE SHAREHOLDERS OF THE FUND INTO CONSIDERATION IN DETERMINING, COMPOSING OR CALCULATING THE INDEX. GOLDMAN SACHS OR ANY OF ITS AFFILIATES MAY HOLD LONG OR SHORT POSITIONS IN SECURITIES HELD BY THE FUND OR IN RELATED DERIVATIVES.

GOLDMAN SACHS DOES NOT GUARANTEE THE ADEQUACY, TIMELINESS, ACCURACY AND/OR THE COMPLETENESS OF THE INDEX OR ANY DATA RELATED THERETO. GOLDMAN SACHS HEREBY EXPRESSLY DISCLAIM ANY AND ALL LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS THEREIN OR IN THE CALCULATION THEREOF. GOLDMAN SACHS MAKES NO WARRANTY, EXPRESS OR IMPLIED, AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE MARKS, THE INDEX OR ANY DATA INCLUDED THEREIN AS TO THE RESULTS TO BE OBTAINED BY THE FUND, THE SHAREHOLDERS, OR ANY OTHER PERSON OR ENTITY FROM USE OF THE INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING GOLDMAN SACHS HEREBY EXPRESSLY DISCLAIMS ANY AND ALL LIABILITY FOR ANY SPECIAL, PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS), EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Index Benchmarks

The MSCI World ex USA Index, MSCI Emerging Markets Index, MSCI Europe Index and MSCI Japan Index are used by Goldman Sachs Asset Management as the reference indexes for selection of the companies included in the Goldman Sachs ActiveBeta[®] International Equity Index, Goldman Sachs ActiveBeta[®] Emerging Markets Equity Index, Goldman Sachs ActiveBeta[®] Europe Equity Index, and Goldman Sachs ActiveBeta[®] Japan Equity Index, respectively. MSCI Inc. does not in any way sponsor, support, promote or endorse the Goldman Sachs ActiveBeta[®] Indexes. MSCI Inc. was not and is not involved in any way in the creation, calculation, maintenance or review of the Goldman Sachs ActiveBeta[®] indexes. The MSCI Indexes were provided on an “as is” basis. MSCI Inc., its affiliates and any other person or entity involved in or related to compiling, computing or creating the MSCI indexes (collectively, the “MSCI Parties”) expressly disclaim all warranties (including, without limitation, any warranties of originality, accuracy, completeness, timeliness, non-infringement, merchantability and fitness for a particular purpose). Without limiting any of the foregoing, in no event shall any MSCI Party have any liability for any direct, indirect, special, incidental, punitive, consequential (including without limitation lost profits) or any other damages in connection with the

MSCI Indexes, the Goldman Sachs ActiveBeta[®] Equity ETFs or the Goldman Sachs ActiveBeta[®] Equity Indexes.

The Goldman Sachs ActiveBeta[®] Equity ETFs are not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Index and/or Index trade mark or the Index Price at any time or in any other respect. The Goldman Sachs ActiveBeta[®] Equity Indexes are calculated and published by Solactive AG. Solactive AG uses its best efforts to ensure that the Indexes are calculated correctly. Irrespective of its obligations towards the Issuer, Solactive AG has no obligation to point out errors in the Indexes to third parties including but not limited to investors and/or financial intermediaries of the financial instrument. Neither publication of the Index by Solactive AG nor the licensing of the Index or Index trade mark for the purpose of use in connection with the financial instrument constitutes a recommendation by Solactive AG to invest capital in said financial instrument nor does it in any way represent an assurance or opinion of Solactive AG with regard to any investment in this financial instrument.

The Russell 2000 Index was used by Goldman Sachs Asset Management or its affiliate as the starting universe for the selection of the companies and their weights included in the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity Index. Frank Russell Company ("Russell") does not in any way sponsor, support, promote or endorse the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity Index or the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity ETF. Russell was not and is not involved in any way in the creation, calculation, maintenance or review of the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity Index. The Russell 2000 Index was provided on an "as-is" basis. Russell, its affiliates and any other person or entity involved in or related to compiling, computing or creating the Russell 2000 Index (collectively, the "Russell Parties") expressly disclaim all warranties (including, without limitation, any warranties of originality, accuracy, completeness, timeliness, non-infringement, merchantability and fitness for a particular purpose).

Russell does not make any claim, prediction, warranty or representation whatsoever, expressly or impliedly, either as to (i) the results to be obtained from the use of the Russell 2000 Index or the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity Index (upon which the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity ETF is said to stand at any particular time on any particular day or otherwise, or (iii) the suitability of the Russell 2000 Index or the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity Index for the purpose to which it is being put in connection with the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity ETF.

Russell has not provided and will not provide any financial or investment advice or recommendation in relation to the Russell 2000 Index or the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity Index to Goldman Sachs Asset Management or to its clients. The Russell 2000 Index is calculated by Russell or its agent. Russell shall not be (a) liable (whether in negligence or otherwise) to any person for any error in the Index or (b) under any obligation to advise any person of any error therein.

Without limiting any of the foregoing, in no event shall any Russell Party have any liability for any direct, indirect, special, incidental, punitive, consequential (including without limitation lost profits) or any other damages in connection with the Russell 2000 Index, the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity ETF, or the Goldman Sachs ActiveBeta[®] U.S. Small Cap Equity Index.
