

Guideline relating to the

**Ethical US Equity Index**

Version 2.0 dated September 30th, 2019

# Contents

## Introduction

### 1 Index specifications

- 1.1 Short name and ISIN
- 1.2 Initial value
- 1.3 Distribution
- 1.4 Prices and calculation frequency
- 1.5 Weighting
- 1.6 Decision-making bodies
- 1.7 Publication
- 1.8 Historical data
- 1.9 Licensing

### 2 Composition of the Index

- 2.1 Selection and weighting of the Index components
- 2.2 Ordinary adjustment
- 2.3 Extraordinary adjustment

### 3 Calculation of the Index

- 3.1 Index formula
- 3.2 Accuracy
- 3.3 Adjustments
- 3.4 Dividends and other distributions
- 3.5 Corporate actions
- 3.6 Calculation of the Index in the event of a market disruption

### 4 Definitions

### 5 Appendix

- 5.1 Contact data
- 5.2 Calculation of the Index – change in calculation method

This document contains the underlying principles and regulations regarding the structure and the operating of the Ethical US Equity Index. Solactive AG shall make every effort to implement regulations. Solactive AG does not offer any explicit or tacit guarantee or assurance, neither pertaining to the results from the use of the Index nor the Index value at any certain point in time nor in any other respect. The Index is merely calculated and published by Solactive AG and it strives to the best of its ability to ensure the correctness of the calculation. There is no obligation for Solactive AG – irrespective of possible obligations to issuers – to advise third parties, including investors and/or financial intermediaries, of any errors in the Index. The publication of the Index by Solactive AG is no recommendation for capital investment and does not contain any assurance or opinion of Solactive AG regarding a possible investment in a financial instrument based on this Index.

## **Introduction**

This document is to be used as a guideline with regard to the composition, calculation and management of the Ethical US Equity Index. Any changes made to the guideline are initiated by the Committee specified in section 1.6. The Ethical US Equity Index is calculated and published by Solactive AG.

## **1 Index specifications**

The Ethical US Equity Index (the “**Index**”) is an Index of Solactive AG and is calculated and distributed by this provider. It tracks the price movements in shares of companies that have a high dividend, relatively low historical volatility and pass several corporate social responsibility screens applied by the Index Adviser and the Index Certifier.

The Index is a price return Index.

The Index is published in USD.

### **1.1 Short name and ISIN**

The Ethical US Equity Index is distributed under ISIN DE000SLA6US0; the WKN is SLA6US. The Index is published in Reuters under the code <.SOLEUS> and in Bloomberg under the code SOLEUS <Index>.

### **1.2 Initial value**

The Index is based on 100 as at the close of trading on the start date of 31st December 1999.

### **1.3 Distribution**

The Ethical US Equity Index is published via the price marketing services of Boerse Stuttgart AG and is distributed to all affiliated vendors. Each vendor decides on an individual basis as to whether he will distribute/display the Ethical US Equity Index via his information systems.

### **1.4 Prices and calculation frequency**

The price of the Ethical US Equity Index is calculated on each Business Day based on the prices on the respective Exchanges on which the Index Components are listed. The most recent prices of all Index Components are used. Prices of Index Components not listed in the Index Currency are translated using spot foreign exchange rates quoted by Reuters. Should there be no current price available on Reuters, the most recent price or the Trading Price on Reuters for the preceding Trading Day is used in the calculation.

The Ethical US Equity Index is calculated every Business Day from 09:30am to 4:30pm, EST. In the event that data cannot be provided to Reuters or to the pricing services of Boerse Stuttgart AG the Index cannot be distributed.

### **1.5 Weighting**

On each Adjustment Day each Index Component of the Ethical US Equity Index is weighted according to section 2.1.

## **1.6 Index Committee**

A Committee composed of staff from Solactive AG and Forum Ethibel is responsible for applying the rules as described in this index guideline as well as any amendments to the rules ( in this document referred to as the "Committee" or the "Index Committee"). The future composition of the Ethical US Equity Index is determined by the Committee on the Selection Days according to the rules. The Committee shall also decide about the future composition of the Ethical US Equity Index if any Extraordinary Events should occur and the implementation of any necessary adjustments. As soon as a decision has been taken all parties related to the index are informed about the Extraordinary Event as well as the decided treatment and date of implementation.

The Committee can also make amendments to the index rules if required. As an example, if the index does not meet legal or regulatory requirements (for the index itself or related financial products) anymore the Committee reserves the right to adjust the rules to meet these requirements. This may affect selection criteria or weighting rules. If there are any changes to the rules, all parties related to the index are informed and the new rulebook will be published on the company website [www.solactive.com](http://www.solactive.com).

## **1.7 Publication**

All specifications and information relevant for calculating the Index are made available on the <http://www.solactive.com> web page and sub-pages.

## **1.8 Historical data**

Historical data will be maintained from the launch of the Index on 28<sup>th</sup> August 2014.

## **1.9 Licensing**

Licenses to use the Index as the underlying value for derivative instruments are issued to stock exchanges, banks, financial services providers and investment houses by Solactive AG.

## 2 Composition of the Index

### 2.1 Selection and weighting of the Index Components

The initial composition of the Index as well as any ongoing adjustment is based on the following rules:

On the Selection Days, the Index Adviser and Solactive AG provide the Selection Pool (Chapter 4).

All companies fulfilling the criteria of the Selection Pool are ranked by sector and increasing Historical Volatility. Sector classification is based on FactSet Industries and Economic Sectors, highest sector level. The company with the lowest Historical Volatility is assigned rank number 1, the company with the second-lowest Historical Volatility ranks number 2 etc.

The seven highest ranked companies in each sector, or less if fewer than seven companies in a given sector fulfil the criteria of the selection pool will be re-ranked increasingly according to their Historical Volatility. The company with the lowest Historical Volatility is assigned rank number 1, the company with the second-lowest Historical Volatility ranks number 2 etc.

The 30 highest ranked companies that receive Forum Ethibel certification are then chosen as Index Components and the new Index composition determined this way is valid starting the immediately following Adjustment Day. For clarification, rank number 1 is higher than rank number 2.

If there will remain less than 30 companies in the final selection pool, the final ranking overall sectors will be eased to eight companies per sector. If necessary, the sector constraint will be eased up to ten companies per sector. If there will still remain less than 30 companies in the final selection pool, the Vigeo score will be eased (score above 45<sup>th</sup> percentile, 40<sup>th</sup> percentile, 35<sup>th</sup> percentile, etc.) up to the situation the selection process ends up with 30 companies.

On the Selection Day the percentage weightings of Index Components will be determined and implemented at the close of trading on the Adjustment Day. The percentage weighting of each Index Component will be determined according to the following formula (“Weighting Scheme”):

$$Weight(i) = \frac{1/Histo\_Vol(i)}{\sum_{j=1}^{50} 1/Histo\_Vol(j)}$$

The new final number of shares will be calculated according to the following formula:

$$x_{i,t+1} = \frac{Index_t * Weight_i}{P_{i,t}}$$

with:

$x_{i,t+1}$ =	Number of Shares of Index Component i on the business day immediately following an Adjustment day
$Index_t$ =	Index Level on Adjustment day
$Weight_i$ =	Percentage Weighting of Index Component I as defined by the Weighting Scheme
$P_{i,t}$ =	Price of Index Component on the Adjustment Day converted into Index Currency (USD)

## 2.2 Ordinary adjustment

The composition of the Index is ordinarily adjusted four times a year on the second-last Business Day in March, June, September and December. The composition of the Ethical US Equity Index is reviewed on the Selection Day. The new composition has to be certified by Forum Ethibel (see Chapter 4 for more details). The certification occurs no later than 10 business days after the Selection Day.

The Index is rebalanced quarterly over a five-day period to ensure that rebalance transactions stay below the average daily trading volumes. Beginning on the second-last business day of the month, and continuing until the fourth business day of the following month, the weights of the constituents of the Index on the  $n^{\text{th}}$  day are set as follows.

$$Weight_i(t_0 + n - 1) = Weight_i(t_0 - 1) + \frac{n * (Weight_i^* - Weight_i(t_0 - 1))}{D}, 0 < n \leq 5$$

where:

$t_0$	=	First rebalancing day
$Weight_i(t)$	=	Weight of company $i$ at time $t$
$Weight_i^*$	=	Target weight of company $i$ after the rebalance
$n$	=	$n^{\text{th}}$ day of the rebalancing period
$D$	=	Total number of days in the rebalancing period (5)

The first adjustment will be made in September 2014 based on the Trading Prices of the Index Components on the Adjustment Day.

Solactive AG shall publish any changes made to the Index composition on the Selection Day and consequently with sufficient notice before the Adjustment Day.

## 2.3 Extraordinary adjustment

If a company included in the Ethical US Equity Index is removed from the Index between two Adjustment Days due to an Extraordinary Event, the weight of the respective company will be split equally amongst the remaining companies. The Ethical US Equity Index is adjusted on the same day. This is announced by Solactive AG after the close of business on the day on which the new composition of the Index was determined by the Committee.

## 3 Calculation of the Index

### 3.1 Index formula

The Ethical US Equity Index is an Index whose value on a Business Day is equivalent to the sum over all Index Components of the products of (a) the Number of Shares of the Index Component and (b) the price of the Index Component at the respective Exchange.

As a formula:

$$Index_t = \sum_{i=1}^n x_{i,t} * p_{i,t}$$

with:

$x_{i,t}$  = Number of Shares of the Index Component i on Trading Day t

$p_{i,t}$  = Price of Index Component i on Trading Day t converted into Index currency (USD)

### 3.2 Accuracy

The value of the Index will be rounded to four decimal places.

The Number of Shares of the Index Components will be rounded to six decimal places.

Trading Prices will be rounded to four decimal places.

### 3.3 Adjustments

Indices need to be adjusted for systematic changes in prices once these become effective. This requires the new Number of Shares of the affected Index Component to be calculated on an ex-ante basis.

This procedure ensures that the first ex quote can be properly reflected in the calculation of the Index. This ex-ante procedure assumes the general acceptance of the Index calculation formula as well as open access to the parameter values used. The calculation parameters are provided by Solactive AG.

Any delay in calculating the new Number of Shares of an Index Component would create problems. Therefore the procedure described above is the most appropriate.

### 3.4 Special Dividends and other distributions

Cash Dividends are not adjusted in the Index due to the price return nature of the Index.

Special Cash Dividend payments and other distributions are included in the Index. They cause an adjustment of the Number of Shares of the corresponding Index Component. The new Number of Shares is calculated as follows:

$$x_{it} = x_{i,t-1} * \frac{P_{i,t-1}}{P_{i,t-1} - D_{i,t}}$$

with

$x_{i,t}$  = Number of Shares of the Index Component i on Trading Day t

$D_{i,t}$  = Payment on Trading Day t multiplied by the Dividend Correction Factor of the respective country

## 3.5 Corporate actions

### 3.5.1 Principles

Following the announcement by a company included in the Index of the terms and conditions of a corporate action the Index Calculator determines whether such corporate action has a dilution, concentration or other effect on the price of the Index Component.

If this should be the case the Index Calculator shall make the necessary adjustments to the affected Index Component and/or the formula for calculating the Index and/or to other terms and conditions of this document that he deems appropriate in order to take into account the dilution, concentration or other effect and shall determine the date on which this adjustment shall come into effect.

Amongst other things the Index Calculator can take into account the adjustment made by an Affiliated Exchange as a result of the corporate action with regard to option and futures contracts on the respective share traded on this Affiliated Exchange.

### 3.5.2 Capital increases

In the case of capital increases (from the company's own resources or through cash contributions) the new Numbers of Shares are calculated as follows:

$$x_{i,t} = x_{i,t-1} * \frac{p_{i,t-1}}{p_{i,t-1} - rB_{i,t-1}} \quad \text{with:} \quad rB_{i,t-1} = \frac{p_{i,t-1} - B - N}{BV + 1}$$

- $x_{i,t}$  = Number of Shares of Index Component i on the day of the distribution
- $x_{i,t-1}$  = Number of Shares of Index Component i on the day prior to the distribution
- $p_{i,t-1}$  = Closing price on the day prior to ex date
- $rB_{i,t-1}$  = Calculated value of rights issue
- $B$  = Price of rights issue
- $N$  = Dividend disadvantage
- $BV$  = Subscription ratio

$B=0$  if capital is increased from the company's own resources.

The last dividend paid or the announced dividend proposal is applied as the dividend disadvantage.

### 3.5.3 Capital reductions

In the case of capital reductions the new Number of Shares is determined as follows:

$$x_{i,t} = x_{i,t-1} * \frac{1}{H_{i,t}}$$

- $H_{i,t}$  = Reduction ratio of the company on day t
- $x_{i,t}$  = Number of Shares of the affected Index Component on the day of the distribution
- $x_{i,t-1}$  = Number of Shares of the affected Index Component on the day prior to the distribution

### 3.5.4 Share splits and par value conversions

In the case of share splits and par value conversions it is assumed that the prices change in ratio to the number of shares or to the par values. The new Number of Shares is calculated as follows:

$$x_{i,t} = x_{i,t-1} * \frac{N_{i,t-1}}{N_{i,t}}$$

$N_{i,t-1}$  = Former par value of security class i (or new number of shares)

$N_{i,t}$  = New par value of security class i (or former number of shares)

$x_{i,t}$  = Number of Shares of the affected Index Component on the day of the distribution

$x_{i,t-1}$  = Number of Shares of the affected Index Component on the day prior to the distribution

### 3.6 Calculation of the Index in the event of a Market Disruption Event

An Index is not calculated in the event of a Market Disruption Event. If the Market Disruption Event continues over a period of eight Trading Days, the Index Calculator calculates the Index value, taking into account the market conditions prevailing at this point in time, the last quoted Trading Price for each of the Index Components as well as any other conditions that it deems relevant for calculating the Index value.

## 4. Definitions

“**Selection Pool**” in respect of a Selection Day are those companies that fulfill the following conditions:

The Index Adviser on a quarterly basis sends a selection universe consisting of US companies, screened for a number of ESG constraints. The companies in the selection universe need to fulfill the following requirements:

- (a) Vigeo score greater than the global average
- (b) Vigeo score greater than their sector peers
- (c) No major involvement in Weapons, Gambling, Tobacco and Nuclear (major means more than 5% of sales from Nuclear)

Additionally, the companies need to fulfil the following:

- (d) Incorporation and stock market listing in the US or incorporation outside the US but for which the US listing is the primary issue.
- (e) Primary Listing on a regulated stock exchange in the form of shares tradable for foreign investors without restrictions.
- (f) Average daily trading volume in the 20 trading days of at least 50,000,000 USD.
- (g) Dividend Yield equal or greater than 115 percent of the Average Dividend Yield.

“**Average Dividend Yield**” is the free float market capitalization weighted average Dividend Yield of the 500 largest companies in the US in terms of free float market capitalization from the selection pool.

“**Dividend Yield**” is the 12-months forward mean estimation as provided by FactSet (or any reference source taking the place of FactSet and providing comparable data items, acceptable to and as determined by the Index Calculator) converted into the Index currency divided by the current price of the stock converted into the Index currency or similar data sources.

“**Historical Volatility**” is the 130 days historical volatility in local currency.

“**Index Component**” is each share currently included in the Index.

“**Number of Shares**” is in respect of an Index Component and any given Business Day the number or fraction of shares included in the Index. It is calculated for any Index Component as the ratio of (A) the Percentage Weight of an Index Component multiplied by the Index value and (B) its Trading Price.

“**Percentage Weight**” of an Index Component is the ratio of its Trading Price multiplied by its Number of Shares divided by the Index value.

“**Dividend Correction Factor**” is calculated as 1 minus the applicable withholding tax rate and/or other applicable tax rate currently prevalent in the respective country.

In particular an “**Extraordinary Event**” is

- a Merger
- a Takeoverbid
- a delisting
- the Nationalisation of a company
- Insolvency.

The Trading Price for this Index Component on the day the event came into effect is the last available market price for this Index Component quoted on the Exchange on the day the event came into effect (or, if a market price is not available for the day the event came into effect, the last available market price quoted on the Exchange on a day specified as appropriate by

the Index Calculator), as determined by the Index Calculator, and this price is used as the Trading Price of the particular Index Component until the end of the day on which the composition of the Index is next set.

In the event of the Insolvency of an issuer of an Index Component the Index Component shall remain in the Index until the next Adjustment Day. As long as a market price for the affected Index Component is available on a Business Day, this shall be applied as the Trading Price for this Index Component on the relevant Business Day, as determined in each case by the Index Calculator. If a market price is not available on a Business Day the Trading Price for this Index Component is set to zero. The Committee may also decide to eliminate the respective Index Component at an earlier point in time prior to the next Adjustment Day. The procedure in this case is identical to an elimination due to and Extraordinary Event.

An Index Component is **“delisted”** if the Exchange announces pursuant to the Exchange regulations that the listing of, the trading in or the issuing of public quotes on the Index Component at the Exchange has ceased immediately or will cease at a later date, for whatever reason (provided delisting is not because of a Merger or a Takeoverbid), and the Index Component is not immediately listed, traded or quoted again on an exchange, trading or listing system, acceptable to the Index Calculator,

**“Insolvency”** occurs with regard to an Index Component if (A) all shares of the respective issuer must be transferred to a trustee, liquidator, insolvency administrator or a similar public officer as result of a voluntary or compulsory liquidation, insolvency or winding-up proceedings or comparable proceedings affecting the issuer of the Index Components or (B) the holders of the shares of this issuer are legally enjoined from transferring the shares.

A **“Takeoverbid”** is a bid to acquire, an exchange offer or any other offer or act of a legal person that results in the related legal person acquiring as part of an exchange or otherwise more than 10% and less than 100% of the voting shares in circulation from the issuer of the Index Component or the right to acquire these shares, as determined by the Index Calculator based on notices submitted to public or self-regulatory authorities or other information considered by the Index Calculator to be relevant.

With regard to an Index Component a **“Merger”** is

- (i) a change in the security class or a conversion of this share class that results in a transfer or an ultimate definite obligation to transfer all the shares in circulation to another legal person,
- (ii) a merger (either by acquisition or through forming a new structure) or a binding obligation on the part of the issuer to exchange shares with another legal person (except in a merger or share exchange under which the issuer of this Index Component is the acquiring or remaining company and which does not involve a change in security class or a conversion of all the shares in circulation),
- (iii) a takeover offer, exchange offer, other offer or another act of a legal person for the purposes of acquiring or otherwise obtaining from the issuer 100% of the shares issued that entails a transfer or the irrevocable obligation to transfer all shares (with the exception of shares which are held and controlled by the legal person), or
- (iv) a merger (either by acquisition or through forming a new structure) or a binding obligation on the part of the issuer of the share or its subsidiaries to exchange shares with another legal person, whereby the issuer of the share is the acquiring or remaining company and it does not involve a change in the class or a conversion of the all shares issued, but the shares in circulation directly prior to such an event (except for shares held and controlled by the legal person) represent in total less than 50% of the shares in circulation directly subsequent to such an event.

The **“Merger Date”** is the date on which a Merger is concluded or the date specified by the Index Calculator if such a date cannot be determined under the law applicable to the Merger.

**“Nationalisation”** is a process whereby all shares or the majority of the assets of the issuer of the shares are nationalised or are expropriated or otherwise must be transferred to public bodies, authorities or institutions.

**“Exchange”** is, in respect of the Selection Pool and every Index Component, the respective primary exchange where the Index Component has its primary listing. The Committee may decide to declare a different stock exchange the **“Exchange”** for trading reasons, even if the company is only listed there via a Stock Substitute.

**“Stock Substitute”** includes in particular American Depository Receipts (ADR) and Global Depository Receipts (GDR).

With regard to an Index component (subject to the provisions given above under **“Extraordinary Events”**) the **“Trading Price”** in respect of a Trading Day is the closing price on this Trading Day determined in accordance with the Exchange

regulations. If the Exchange has no closing price for an Index Component, the Index Calculator shall determine the Trading Price and the time of the quote for the share in question in a manner that appears reasonable to him.

A “**Trading Day**” is in relation to the Index or an Index Component a Trading Day on the Exchange (or a day that would have been such a day if a market disruption had not occurred), excluding days on which trading may be ceased prior to the normal Exchange closing time. The Index Calculator is ultimately responsible as to whether a certain day is a Trading Day with regard to the Index or an Index Component or in any other connection relating to this document.

A “**Business Day**” is a day on which Stuttgart Stock Exchange is open for trading.

The “**Index Calculator**” is Solactive AG or any other appropriately appointed successor in this function.

The “**Index Adviser**” is Vigeo. Vigeo is part of the Vigeo Group, the leading European agency for measuring social responsibility. Vigeo measures the performances and level of management of the social responsibility risks of companies and organisations. It therefore analyses the extent to which companies and public authorities integrate environmental, social, societal and good governance objectives in the definition and deployment of their strategy or policies. The index consists of 30 European stocks selected for inclusion on two filters, the ESG filter and the financial filter. The ESG filter is based on the Research of VIGEO, an independent and well-established Environmental, Social and Governance (ESG) rating agency. Vigeo analyses more than 3000 issuers on the ESG Risks on a specific methodology based on Six domains (human rights, environment, human resources, community involvement, business behaviour and corporate governance) and 38 drivers based on the universal standards of, for example, the ILO, united nations, OECD. In function of the economical sector of the issuers, Vigeo customises the model and the weight of each sustainability driver according to the assessed materiality of the criteria for long-term business success. Each company is analysed according to this methodology through the assessment of available public information from the issuer and their stakeholders (labour union, NGO, customers association, press...). Currently Vigeo analyses around 600 European stocks. For this index eligible companies are identified each quarter and must demonstrate the following characteristics:

- have a score superior to the European average and superior to the sector average
- have no major exposure to armament, gambling, tobacco, nuclear
- have no major controversies in social, human rights or environment issues.

At the end of this process, and each quarter, Forum Ethibel, an independent Belgian association, assesses the results and certifies the respect of the sustainability, ethics, and social responsibility metrics of the selected corporations.

The “**Index Certifier**” is Forum Ethibel. Forum ETHIBEL is a non profit making organisation based in Brussels. It was originally set up in 1991, under the name ETHIBEL asbl, by non governmental organisations in the most diverse social action domains, with a view to independent screenings of ethical investment funds. Early 2006, ETHIBEL asbl became “Forum ETHIBEL” asbl. Forum ETHIBEL creates a bridge between the business and the financial world, the NGO sector and the general public. As a fully independent association, Forum ETHIBEL carries out stock selection and is specialised in socio-ethical and ecological investments. The ETHIBEL label is a European registered collective quality label given to socially responsible investment funds that meet its criteria. The label offers investors a real guarantee that investments are made only in companies selected from the ETHIBEL investment register.

The **Forum Ethibel Certification** relies on three screens:

- 1) ILO Conventions
- 2) Human Rights
- 3) Environmental controversies/allegations/convictions

This screens might be amended over time by Forum Ethibel.

The “**Index Currency**” is USD.

“**Market Capitalization**” is with regard to each of the shares in the Selection Pool on a Selection Day or Adjustment Day the value published by Reuters (or a successor) as the Market Capitalization for this day.

As at the date of this document Market Capitalization is defined by Reuters as the value of a company calculated by multiplying the number of shares outstanding of the company by its share price. “**Free Float Market Capitalization**” is with regard to each of the shares in the Selection Pool or in the Index on a Selection Day or Adjustment Day the Market Capitalization for this day multiplied by the ratio of (A) the number of shares in circulation and (B) the number of shares outstanding of the respective company.

If Reuters (or a successor):

- (i) does not publish for a Selection Day a Market Capitalization for a share or

(ii) adopts another method for calculating the Market Capitalization for all shares or only with regard to the share in question or uses different assumptions in calculating the Market Capitalization for all shares or only with regard to the share in question, and in the reasonable assessment of the Index Calculator involves material changes (the Index Calculator makes the decision as to whether such changes are to be deemed “material” by applying factors that in his reasonable assessment appear appropriate to him), the Index Calculator will determine the Market Capitalization in respect of the shares or of a share included in the Selection Pool and the respective Selection Day either from another publicly accessible source specified at his sole discretion or from other sources that in his assessment are reasonable and appropriate in the event that no other publicly quoted suitable prices are available.

“**Adjustment Day**” is the second-last Business Day in March, June, September and December.

“**Selection Day**” is the Business Day 10 Business Days before the Adjustment Day.

An “**Affiliated Exchange**” is with regard to an Index Component an exchange, a trading or quotation system on which options and futures contracts on the Index Component in question are traded, as specified by the Index Calculator.

A “**Market Disruption Event**” occurs if

1. one of the following events occurs or exists on a Trading Day prior to the opening quotation time for an Index Component:
  - A) trading is suspended or restricted (due to price movements that exceed the limits allowed by the Exchange or an Affiliated Exchange, or for other reasons):
    - 1.1. across the whole Exchange; or
    - 1.2. in options or futures contracts on or with regard to an Index Component or an Index Component that is quoted on an Affiliated Exchange; or
    - 1.3. on an Exchange or in a trading or quotation system (as determined by the Index Calculator) in which an Index Component is listed or quoted; or
  - B) an event that (in the assessment of the Index Calculator) generally disrupts and affects the opportunities of market participants to execute on the Exchange transactions in respect of a share included in the Index or to determine market values for a share included in the Index or to execute on an Affiliated Exchange transaction with regard to options and futures contracts on these shares or to determine market values for such options or futures contracts; or
2. trading on the Exchange or an Affiliated Exchange is ceased prior to the usual closing time (as defined below), unless the early cessation of trading is announced by the Exchange or Affiliated Exchange on this Trading Day at least one hour before
  - (aa) the actual closing time for normal trading on the Exchange or Affiliated Exchange on the Trading Day in question or, if earlier.
  - (bb) the closing time (if given) of the Exchange or Affiliated Exchange for the execution of orders at the time the quote is given.“**Normal exchange closing time**” is the time at which the Exchange or an Affiliated Exchange is normally closed on working days without taking into account after-hours trading or other trading activities carried out outside the normal trading hours; or
3. a general moratorium is imposed on banking transactions in the country in which the Exchange is resident if the above-mentioned events are material in the assessment of the Index Calculator, whereby the Index Calculator makes his decision based on those circumstances that he considers reasonable and appropriate.

### **5.2 Calculation of the Index – change in calculation method**

The application by the Index Calculator of the method described in this document is final and binding. The Index Calculator shall apply the method described above for the composition and calculation of the Index. However it cannot be excluded that the market environment, supervisory, legal, financial or tax reasons may require changes to be made to this method. The Index Calculator may also make changes to the terms and conditions of the Index and the method applied to calculate the Index, which he deems to be necessary and desirable in order to prevent obvious or demonstrable error or to remedy, correct or supplement incorrect terms and conditions. The Index Calculator is not obliged to provide information on any such modifications or changes. Despite the modifications and changes the Index Calculator will take the appropriate steps to ensure a calculation method is applied that is consistent with the method described above.
