This document contains the rules regarding the structure and calculation of the Solactive US Energy Infrastructure MLP 30 Index (the “**Index**”). Solactive AG shall make every effort to implement such rules. Solactive AG does not offer any explicit or tacit guarantee or assurance, neither pertaining to the results from the use of the Index nor the Index value at any point in time nor in any other respect. The Index is calculated and published by Solactive AG without warranty, and Solactive AG shall strive to the best of its ability to ensure the correctness of the calculation. There is no obligation for Solactive AG to notify third parties, including investors and/or financial intermediaries, of any errors in the Index. The publication of the Index by Solactive AG is not a recommendation for capital investment and does not indicate any assurance or opinion of Solactive AG regarding a possible investment in a financial instrument based on this Index.

Introduction

These Guidelines are to be used as a guideline with respect to the composition, calculation and management of the Index. Any changes made to these Guidelines from time to time shall be initiated by the Committee specified in Section 1.6. The Index is calculated, published and distributed by Solactive AG. The name “Solactive” is trademarked.

1 Index specifications

The Index is calculated and distributed by Solactive AG. It tracks the price movements of common units in Master Limited Partnerships (“MLPs”) which are publicly traded on US stock exchanges and subject to the same accounting, reporting and regulations as publicly traded corporations. MLPs are typically engaged in, own and operate assets used in energy logistics, including, but not limited to, pipelines, storage facilities and other assets used in transporting, storing, gathering, and processing natural gas, natural gas liquids, crude oil or refined products.

The Solactive US Energy Infrastructure MLP 30 Index is calculated as a *net total return index*.

The Index is published in USD.

1.1 Index codes and tickers

Index name	Solactive US Energy Infrastructure MLP 30 Index
ISIN	tbd
WKN	tbd
Bloomberg	SOLMUS30 Index
Reuters	.SOLMUS30

1.2 Initial value

The Index is based on 1000 at the close of trading on the start date, December 15th, 2015 (the “**Start Date**”).

1.3 Distribution

The Index is published via the price marketing services of Boerse Stuttgart AG and is distributed to all affiliated vendors. Each vendor determines whether they will distribute/display the index data via their respective information systems.

1.4 Prices and calculation frequency

The Index is calculated on each Business Day based on the prices on the respective Exchanges relevant to each Index Component. At any given point during the period in which the Index is calculated, the last traded prices of all Index Components are used. If there is no last traded price for an index component on a Business Day, the most recent last traded price on Reuters for the preceding Trading Day is used in the calculation.

The Index is a *real-time* index which is calculated every Business Day from 9:30am to 4:30pm, EST (Eastern Standard Time). It is calculated every 15 seconds. In the event that data cannot be provided to the pricing services of Boerse Stuttgart AG, the publication of the Index value and any distribution thereof may be delayed.

Any incorrect calculation of the Index shall be adjusted on a retrospective basis and announced on <http://www.solactive.com>.

1.5 Weighting

As of the close of business on each Adjustment Day, the Index Components shall be re-balanced in accordance with section 2 of these Guidelines by reference to their last traded prices on the relevant Exchange.

1.6 Decision-making bodies

A Committee composed of staff from Solactive AG is responsible for decisions regarding the composition of the Index as well as any amendments to the Guidelines which may be published from time to time (in this document, referred to as the "**Committee**" or the "**Index Committee**"). The criteria applicable to the Primary Selection Pool and the Extended Selection Pool (set out in section 2) are determined by the Committee from time to time. On each Selection Day, the Committee shall determine the composition of the Index in accordance with the relevant criteria.

The Committee shall also determine the composition of the Index if any Extraordinary Events should occur and shall determine the implementation of any necessary adjustments.

Members of the Committee at any time can recommend changes to the composition of the Index or to the Guidelines and submit them to the Committee for approval.

1.7 Publication

All specifications and information relevant for calculating the Index are made available on <http://www.solactive.com>. This includes the composition of the Index as well as the respective weightings which shall be published on a retrospective basis in respect of each adjustment on the Business Day immediately following such Adjustment Day.

1.8 Historical data

There is no historical data for the index.

1.9 Licensing

Licences to use the Index as the underlying value for derivative instruments may be issued to stock exchanges, banks, financial services providers and investment houses by Solactive AG.

2 Composition of the Index

2.1 Selection of the Index Components

The initial composition of the Index, as well as the ongoing regular adjustments which are determined on each Selection Day and applied on the relevant Adjustment Days, are based on the following rules:

Step 1 The composition of the “**Primary Selection Pool**” is determined by identifying all entities that fulfil all of the following criteria:

- (a) Each entity is listed on a regulated stock exchange in the United States in the form of units which are open to investment by non-domestic investors without any restriction as to quantity of units held or investor qualification criteria.
- (b) Each entity is structured as a Master Limited Partnerships (“**MLP**”) in accordance with the laws and regulations of the United States of America.
- (c) Each entity is an “*infrastructure*” MLP which derives the majority of its revenues from activities relating to owning and operating assets used in energy logistics, including, but not limited to, pipelines, storage facilities and other assets used in transporting, storing, gathering, and processing natural gas, natural gas liquids, crude oil and/or refined products.
- (d) Each entity has made at least one distribution per annum to unit holders in the previous 12 months as of both the previous and current Selection Day.
- (e) Each entity has a Market Capitalisation of at least USD 500,000,000 on the relevant Selection Day.
- (f) For each entity, the average *daily* trading volume in the three months immediately preceding the relevant Selection Day was at least USD 4,000,000.

Step 2 The entities contained in the Primary Selection Pool are first of all ranked individually according to the following two separate, equal weighted criteria:

- Forward Looking Distribution Yield
- Distribution Stability

In case an entity has a Distribution Stability equal to 0.00%, the entity will be rated at the bottom of the ranking with a rank of 1. In case more than one entity have a Distribution Stability equal to 0.00 %, all of these entities will be rated on the very same rank of 1. If so, the first entity with a Distribution Stability unequal to 0.00% will be rated at the rank of 2. In this case the highest rank needs to be adjusted to reflect that one rank has been addressed to more than one entity. For clarification, rank 2 is higher than rank 1.

Step 3 The 30 entities with the highest ranks in accordance with Step 2 are selected as the Index Components and are weighted equally. In case more than one entity end up at the same final rank r_1 after applying Step 2, the entity with higher Forward Looking Distribution Yield will be rated preferentially and will therefore remain at rank r_1 . The other entity will be rated to the very next rank below r_1-1 .

If there are fewer than 30 entities within the Primary Selection Pool, then the total number of entities within the Primary Selection Pool are selected (which shall be not less than 20 entities) and weighted equally.

In case the entity ENLINK MIDSTREAM PARTNERS LP (US29336U1079) is part of the index selection, the weight of this entity will be capped at 2.50 %. The remaining weight will be distributed equally to the remaining entities within the index.

As of December 15th, the number of Index Components was 30.

In the future, the Committee may from time to time decide to amend the maximum number of Index Components on a Selection Day by making an amendment to these Guidelines.

2.2 Ordinary adjustment

The composition of the Index is ordinarily adjusted twice a year after the close on the relevant Adjustment Days in accordance with the criteria set out at paragraph 2.1 above. The proposed Index composition and *indicative* weightings of each of the Index Components (including details relating to the entities that are being included in/removed from the Index Composition) shall be announced by Solactive AG on the relevant Selection Day (i.e. in advance of the Adjustment Day).

Solactive AG shall publish all details relating to the adjustment of the Index Composition (i.e. the *actual* weights) on the Business Day after each relevant Adjustment Day.

3 Calculation of the Index

3.1 Index formula

The Index is an index whose value on a Business Day is equivalent to the sum overall Index Components of the products of (a) the Number of Units of the Index Component and (b) the price of the Index Component at the respective Exchange.

As a formula:

$$Index_t = \sum_{i=1}^n x_{i,t} * p_{i,t}$$

$x_{i,t}$ = Number of Units of the Index Component i on Trading Day t

$p_{i,t}$ = Price of Index Component i on Trading Day t

Index adjustments

Certain events may lead to a change in the price of an index component. Depending on the type of the index the calculation parameters are adjusted in order to reflect the anticipated price change.

$$x_{i,t+1} = x_{i,t} * \frac{p_{i,t}}{ap_{i,t+1}}$$

The number of index units x of the index component subject to a corporate action is adjusted on the respective ex date of the corporate action. The adjustment conducted in such a way that the index weight of the affected index component and the value of the index are unchanged. As a formula:

with:

$x_{i,t+1}$ = Number of index units of index component i on business day t+1

$x_{i,t}$ = Number of index units of index component i on business day t

$p_{i,t}$ = Price of index component i on business day t

$ap_{i,t+1}$ = Adjusted opening price of index component i on business day t+1

3.2 Accuracy

The value of the Index will be rounded to two decimal places.

The Number of Units of the Index Components will be rounded to six decimal places.

Trading Prices will be rounded to four decimal places.

3.3 Extraordinary Events

The Index shall be adjusted for systematic changes in prices once these become effective. This requires the new Number of Units of the affected Index Component to be calculated on an ex-ante basis. Following the Committee's decision, the Index is adjusted for distributions, capital increases, rights issues, splits, par value conversions and capital reductions as outlined below.

This procedure ensures that the first ex quote can be properly reflected in the calculation of the Index. This ex-ante procedure assumes the general acceptance of the Index calculation formula as well as open access to the parameter values used. The calculation parameters are provided by Solactive AG.

The Trading Price for an affected Index Component on the day an Extraordinary Event comes into effect, is the last available market price for this Index Component quoted on the Exchange on the day the event occurred (or, if a market price is not available for the day the event came into effect, the last available market price quoted on the Exchange on a day specified as appropriate by Solactive AG), as determined by Solactive AG, and this price is used as the Trading Price of the particular Index Component until the next Adjustment Day.

When an Index Component's trading has been halted, the Index Calculator holds the component at its most recent closing price until trading is resumed or is officially delisted. Determination for removal will be made on a case-by-case basis and based upon reasonable likelihood of trade resumption and likelihood of residual value returned to unit holders. The Committee may consult with managers of portfolios linked to indices in which the affected component is a constituent in determining its fair value. Should removal be deemed appropriate, announcement will be made at zero value (for system purposes the actual value used is .0001, in local currency).

Units that are scheduled for changes but are halted or suspended prior to rebalance will have their scheduled updates postponed and will be monitored for trade resumption. Once trading resumes, these securities changes will be announced and will have their positions updated accordingly. Depending on the nature of the halt or suspension, the Index Committee may decide to delete the affected security from the index.

In the event of the Insolvency of an Index Component, the Index Component shall remain in the Index until the next Adjustment Day. As long as a market price for the affected Index Component is available on a Business Day, this shall be applied as the Trading Price for the relevant Index Component on the relevant Business Day, as determined in each case by Solactive AG. If a market price is not available on a Business Day, the Trading Price for this Index Component is set to zero per above. Solactive AG may also decide to eliminate the respective Index Component at an earlier point in time prior to the next Adjustment Day if there is no reasonable expectation that the Index Component will emerge from Insolvency in the near future.

Table 1 below summarises **potential** events for which adjustments may be made by the Calculation Agent.

Event	Adjustment	Adjustment Treatment
Cash/Special or Extraordinary Distributions	Yes	The Distribution is reinvested in that unit.
Return on Capital	Yes	The Distribution is reinvested in that unit.
Unit Distribution	Yes	Where unit holders receive "B" new units for every "A" unit held, the number of units is adjusted by multiplying the original number of units by the quotient of (a) the sum of A and B <i>divided</i> by (b) A.
Unit Split	Yes	Where unit holders receive "B" new units for every "A" unit held, the number of units is adjusted by multiplying the original number of units by the quotient of B <i>divided</i> by A.
Unit Repurchase	No	No Adjustment.

Event	Adjustment	Adjustment Treatment
Acquisition or Merger (Target Company is in the Index)	Yes	If acquired unit is Delisted (as defined below), the cash proceeds from the acquisition are reinvested proportionally (based on the current weight) among the other constituents. Where units are issued, such units are deemed to be sold on the date of issuance and cash proceeds reinvested as described in the preceding sentence.
Acquisition or Merger (Acquirer is in the Index)	No	If the surviving company is already an Index member, it is retained in the Index.
Acquisition or Merger (both Acquirer and Target Company are in the Index)	Yes	If acquired constituent is Delisted (as defined below), the cash proceeds from the acquisition are proportionally distributed to the remaining index components, according to the terms of the merger/acquisition agreement. Where units are issued, such units are deemed to be sold on the date of issuance and cash proceeds reinvested as described in the preceding sentence.

If a unit that is a constituent of the Index is Delisted, the cash value of such unit's position in the Index, based on the latest available market price prior to the delisting, is reinvested proportionally (based on the current weight) among the other constituents of the Index.

Note that if an Index constituent is both (i) affected by an event listed in Table 1 and (ii) Delisted, such constituent will be adjusted as described in Table 1. A constituent will be deemed to be "Delisted" when the Exchange (as defined under "Market Disruption Events" below) for such constituent announces that the constituent ceases (or will cease) to be listed, traded or publicly quoted on the Exchange for any reason and is not immediately re-listed, re-traded or re-quoted on any of the Affiliated Exchanges (or their respective successors); if the constituent is immediately re-listed, re-traded or re-quoted on any such exchange or quotation system, such exchange or quotation system shall be deemed to be the Exchange and the stock will not be deemed to be Delisted.

For events not listed in Table 1 above, the Calculation Agent may make adjustments if it determines that the event could have a diluting or concentrative effect on the theoretical value of the underlying stock and would not otherwise be accounted for in the Index. Any such adjustments are publicly announced in advance wherever practicable.

3.3.1 Distributions

Distributions paid by the Index Components are automatically re-invested into the Net Total Return Index subject to the relevant Withholding Tax Rate.

Any Distributions shall trigger an adjustment of the Number of Units of the corresponding Index Component. The new Number of Units is calculated as follows:

$$x_{i,t} = x_{i,t-1} * \frac{P_{i,t-1}}{P_{i,t-1} - D_{i,t}}$$

$P_{i,t-1}$ = Closing price on the day prior to ex-date

$x_{i,t}$ = Number of Units of the Index Component i on Trading Day t

$D_{i,t}$ = Distribution on Trading Day t multiplied by the Distribution Correction Factor

3.3.2 Corporate actions

Following the announcement by an Index Component of the terms and conditions of a corporate action, the Committee shall determine whether such corporate action has a dilution, concentration or other effect on the price of the Index Component.

Should such effect be deemed to have occurred, the Committee shall make the necessary adjustments to the affected Index Component and/or the formula for calculating the Index and/or to other terms and conditions of this document that is deemed appropriate in order to take into account the dilution, concentration or other effect and shall determine the date on which this adjustment shall come into effect.

For corporate actions not described herein, or combinations of different types of corporate events and other exceptional cases, Solactive AG reserves the right to determine the appropriate implementation method.

3.3.3 Capital increases

Should there be a capital increase (from the Index Component's own resources or through cash contributions), the new Numbers of Units shall be calculated as follows:

$$x_{i,t} = x_{i,t-1} * \frac{p_{i,t-1}}{p_{i,t-1} - rB_{i,t-1}} \quad \text{with:} \quad rB_{i,t-1} = \frac{p_{i,t-1} - B - N}{BV + 1}$$

$x_{i,t}$	= Number of Units of Index Component i on the day of the distribution
$x_{i,t-1}$	= Number of Units of Index Component i on the day prior to the distribution
$p_{i,t-1}$	= Closing price on the day prior to ex date
$rB_{i,t-1}$	= Calculated value of rights issue
B	= Price of rights issue
N	= Distribution disadvantage
BV	= Subscription ratio

$B=0$ if capital is increased from the company's own resources.

The last Distribution paid or the announced Distribution proposal is applied as the Distribution disadvantage.

3.3.4 Unit splits and par value conversions

Should there be Unit splits and par value conversions it is assumed that the prices shall change in ratio to the number of units or to the par values. The new Number of Units shall be calculated as follows:

$$x_{i,t} = x_{i,t-1} * \frac{N_{i,t-1}}{N_{i,t}}$$

$N_{i,t-1}$	= Former par value of security class i (or new number of units)
$N_{i,t}$	= New par value of security class i (or former number of units)
$x_{i,t}$	= Number of Units of the affected Index Component on the day of the distribution
$x_{i,t-1}$	= Number of Units of the affected Index Component on the day prior to the distribution

3.3.5 Spin-offs

In case of a spin-off affecting an index component, the index is adjusted according to one of the following options based on a decision of the respective index committee:

- 1) The spun-off company is not included in the index. The index is adjusted at the close of trading on the business day prior to the ex date for the value of the right to receive new shares in the spun-off company (based on the

transaction terms and the closing price of the spun-off company on the business day prior to the ex date, if the spun-off company has already been trading before the ex date).

- 2) The spun-off company is added to the index based on the terms of the spin-off and deleted at the close of trading on the ex date.
- 3) The spun-off company is added to the index based on the terms of the spin-off and remains in the index.

3.3.6 Calculation of the Index in the event of a Market Disruption Event

Market Disruption Events

An Index may not be calculated in the event of a Market Disruption Event. If the Market Disruption Event continues for a sustained period, the Index Calculator calculates the Index value, taking into account the market conditions prevailing at this point in time, the last quoted Trading Price for each of the Index Components as well as any other conditions that it deems relevant for calculating a fair value Index value.

4. Definitions

“**Adjustment Day**” is the last Business Day in September and March.

An “**Affiliated Exchange**” is with regard to an Index Component an exchange, a trading or quotation system on which options and futures contracts on the Index Component in question are traded, as specified by Solactive AG.

A “**Business Day**” is a day on which one of the Affiliated Exchanges are open for trading.

“**Calculation Agent**” is Solactive AG or any other appropriately relevant successor thereto.

“**Index Component**” is each entity currently included in the Index.

An Index Component is “**Delisted**” if the Exchange announces pursuant to the Exchange regulations that the listing of, the trading in or the issuing of public quotes on the Index Component at the Exchange has ceased immediately or will cease at a later date, for any reason (provided delisting is not because of a Merger or a Takeover Bid), and the Index Component is not immediately listed, traded or quoted again on an exchange, trading or listing system, acceptable to Solactive AG.

“**Distribution Correction Factor**” is applicable for all Distribution payments. It is calculated as 1 minus the applicable Withholding Tax Rate and/or other applicable tax rate currently prevalent in the respective country.

“**Distribution Stability**” is the ratio of the forward looking distribution derived from FactSet (or any reference source taking the place of FactSet and providing comparable data items, acceptable to and as determined by the Index Calculator) divided by the most recent distribution annualised.

“**Exchange**” is, in respect of the Selection Pool and every Index Component, the respective primary exchange where the Index Component has its primary listing. The Committee may decide to declare a different stock exchange the “Exchange” for trading reasons, even if the Index Component is only listed there via a Stock Substitute.

“**Extraordinary Event**” shall be defined as

- a Takeover Bid;
- Trading Halt
- a Delisting;
- the Nationalisation of an Index Component, its business as a going concern or its assets; or
- Insolvency.

“**Forward Looking Distribution Yield**” is the ratio of the forward looking distribution derived from FactSet (or any reference source taking the place of FactSet and providing comparable data items, acceptable to and as determined by the Index Calculator) divided by the share price as of close of Selection Day.

The “**Index Currency**” is US-Dollar.

“**Insolvency**” occurs with regard to an Index Component if (A) all units of the respective issuer must be transferred to a trustee, liquidator, insolvency administrator or a similar public officer as result of a voluntary or compulsory liquidation, insolvency or winding-up proceedings or comparable proceedings affecting the issuer of the Index Components or (B) the holders of the units of this issuer are legally enjoined from transferring the units.

“**Market Capitalisation**” is with regard to each of the units in the Selection Pool on a Selection Day or Adjustment Day the value of the issuer calculated by multiplying the number of units outstanding of the issuer by its unit price.

A “**Market Disruption Event**” occurs if:

1. one or more of the following events occurs or exists on a Trading Day prior to the opening quotation time for an Index Component:
 - (A) trading is suspended or restricted (due to price movements that exceed the limits allowed by the Exchange or an Affiliated Exchange, or for other reasons):

- 1.1. across the whole Exchange; or
 - 1.2. in options or futures contracts on or with regard to an Index Component or an Index Component that is quoted on an Affiliated Exchange; or
 - 1.3. on an Exchange or in a trading or quotation system (as determined by Solactive AG) in which an Index Component is listed or quoted; or
- (B) an event that (in the assessment of Solactive AG) generally disrupts and affects the opportunities of market participants to execute on the Exchange transactions in respect of a unit included in the Index or to determine market values for a unit included in the Index or to execute on an Affiliated Exchange transaction with regard to options and futures contracts on these units or to determine market values for such options or futures contracts; or
2. trading on the Exchange or an Affiliated Exchange is ceased prior to the usual closing time (as defined below), unless the early cessation of trading is announced by the Exchange or Affiliated Exchange on this Trading Day at least one hour before
 - (i) the actual closing time for normal trading on the Exchange or Affiliated Exchange on the Trading Day in question or, if earlier,
 - (ii) the closing time (if given) of the Exchange or Affiliated Exchange for the execution of orders at the time the quote is given; or
 3. a general moratorium is imposed on banking transactions in the country in which the Exchange is resident if the above-mentioned events are material in the assessment of Solactive AG, whereby Solactive AG makes his decision based on those circumstances that he considers reasonable and appropriate.

A **“Merger”** is:

- (i) a change in the security class or a conversion of a unit class that results in a transfer or an ultimate definite obligation to transfer all the units in circulation to another legal entity;
- (ii) a merger (either by acquisition or through forming a new structure) or a binding obligation on the part of the issuer to exchange units with another legal person (except in a merger or unit exchange under which the issuer of the relevant Index Component is the acquiring or remaining entity and which does not involve a change in security class or a conversion of all the units in circulation);
- (iii) a takeover offer, exchange offer, other offer or another act of a legal person for the purposes of acquiring or otherwise obtaining from the issuer 100% of the units issued that entails a transfer or the irrevocable obligation to transfer all units (with the exception of units which are held and controlled by the legal person); or
- (iv) a merger (either by acquisition or through forming a new structure) or a binding obligation on the part of the issuer of the units or its subsidiaries to exchange units with another legal entity, whereby the issuer of the unit is the acquiring or remaining entity and it does not involve a change in the class or a conversion of the all units issued, but the units in circulation directly prior to such an event (except for units held and controlled by the legal person) represent in total less than 50% of the units in circulation directly subsequent to such an event.

The **“Merger Date”** is the date on which a Merger is concluded or the date specified by Solactive AG if such a date cannot be determined under the law applicable to the Merger.

“Nationalisation” is a process whereby all units or the majority of the assets of the issuer of the units are nationalised or are expropriated or otherwise must be transferred to public bodies, authorities or institutions.

“Normal Exchange Closing Time” is the time at which the Exchange or an Affiliated Exchange is normally closed on working days without taking into account after-hours trading or other trading activities carried out outside the normal trading hours.

“Number of Units” is in respect of an Index Component and any given Business Day the number or fraction of units included in the Index. It is calculated for any Index Component as the ratio of (A) the Percentage Weight of an Index Component multiplied by the Index value and (B) its Trading Price.

“Percentage Weight” of an Index Component is the ratio of its Trading Price multiplied by its Number of Units divided by the Index value.

“Selection Day” is the Business Day 5 Business Days before the Adjustment Day.

“Selection Pool” is the Primary Selection Pool or Extended Selection Pool (as relevant), each of which is defined in section 2.1.

“Stock Substitute” includes in particular American Depositary Receipts (ADR) and Global Depositary Receipts (GDR).

A **“Takeover Bid”** is a bid to acquire, an exchange offer or any other offer or act of a legal person that results in the related legal person acquiring as part of an exchange or otherwise more than 10% and less than 100% of the voting rights in respect of the issuer of the Index Component or the right to acquire these voting rights, as determined by Solactive AG based on notices submitted to public or self-regulatory authorities or other information considered by Solactive AG to be relevant.

A **“Trading Day”** is in relation to the Index or an Index Component a Trading Day on the Exchange (or a day that would have been such a day if a market disruption had not occurred), excluding days on which trading may be ceased prior to the Normal Exchange Closing Time. Solactive AG is ultimately responsible as to whether a certain day is a Trading Day with regard to the Index or an Index Component or in any other connection relating to this document.

A **“Trading Halt”** is where a security’s trading is stopped by an exchange while news is broadcast about the security. Solactive holds the security at its most recent price until trading is resumed or is officially delisted. Determination for removal from the index will be made on a case-by-case basis and based upon reasonable likelihood of trade resumption and likelihood of residual value returned to holders of the security in question.

The **“Trading Price”** in respect of a Trading Day is the closing price on the relevant Trading Day determined in accordance with the Exchange regulations. If the Exchange has no closing price for an Index Component, Solactive AG shall determine the Trading Price and the time of the quote for the unit in question in a reasonable manner.

“Withholding Tax Rate” is the applicable withholding tax rate relevant to the Net Total Return Index. As at the date of this version of the guideline, the applicable withholding tax rate relevant to the Net Total Return Index is 0%.

5.2 Calculation of the Index – change in calculation method

Solactive AG shall apply the method described above for the composition and calculation of the Index. However it cannot be excluded that the market environment, supervisory, legal, financial or tax reasons may require unforeseen changes to be made to this method. Solactive AG may also make changes to the terms and conditions of the Index and the method applied to calculate the Index, which he deems to be necessary and desirable in order to prevent material errors or to remedy, correct or supplement incorrect terms and conditions. Solactive AG shall ensure that any amendments to the methodology are updated and published as soon as possible after any changes to the Index are implemented and shall notify all persons who have licensed the use of the index as far in advance of such implementation as reasonable practicable.. Despite the modifications and changes, Solactive AG will take the appropriate steps to ensure a calculation method is applied that is consistent with the method described above.
