Motif Capital Aging of America 7 ER Index

DESCRIPTION

The Motif Capital Aging of America 7 ER Index (the “Index”):

- Provides exposure to stocks of certain companies concentrated in the healthcare and real estate sectors that may benefit from the long-term demographic shift towards an older population in the United States.
- Is calculated on an excess return basis by measuring the extent to which (a) the stocks and any money market position outperform (b) 3-month USD LIBOR plus 0.75% per annum (accruing daily).
 - The money market position reflects the returns accruing on a hypothetical cash investment in a notional money market account denominated in U.S. dollars that accrues interest at the notional interest rate, which is equal to 3-month USD LIBOR.
- Applies a daily volatility control:
 - Volatility cap: 7%. It is measured on a daily basis by calculating the realized volatility of the stocks for a 20 index business day look back period. The Index is rebalanced by ratably reallocating all or a portion of the exposure to the stocks in the Index to the money market position sufficient to reduce the realized volatility for such period to the volatility cap.
