

INDEX KEY FACTS

- A quantitative strategy for retirement income.
- Investment processes and allocations designed to support inflation-adjusted withdrawals equal to 5% of the initial portfolio value.
- Investment allocations to equities are generally larger than traditional or typical retirement income portfolios.
- Includes an algorithmic risk management component to help preserve retirement capital during sudden and severe market downturns.
- The algorithmic risk mitigation component contributes to a higher betas to U.S. large cap equities during up markets and relatively lower betas to U.S. large cap equities during down markets.

INDEX DESCRIPTION

The Real Spend strategy consists of three main components and a rebalancing rule designed to promote longevity and mitigate the risk that an investor taking systematic withdrawals runs out of money before the end of a fixed time horizon. The first component is an investment portfolio designed to generate returns and growth sufficient to replenish inflation-adjusted withdrawals. The second component is a multi-year spending reserve of liquid assets used to buffer short-term losses and provide liquidity for both current and short-term withdrawals. The third component is an overlay of the Horizon Risk Assist algorithm, an active risk mitigation strategy that allocates dynamically between the investment portfolio and a less risky asset. The goal of the Risk Assist algorithm is to prevent the Index from experiencing losses in excess of a pre-determined maximum over certain rolling periods of time. Finally, on a quarterly basis, a rebalancing mechanism adjusts the allocation between the investment portfolio and the spending reserve in a dynamic manner.

INDEX METHODOLOGY DETAILS

Investment Portfolio: Large-Cap U.S. stocks represented by the SPDR S&P 500 ETF Trust and broad U.S. investment grade bonds.

Spending Reserve: Short-term U.S. Treasury or related securities.

Default Index Allocation: 85% allocated to the investment portfolio and 15% to the spending reserve. In aggregate these allocations equal 68% in Large-Cap U.S. stocks, 17% in U.S. investment grade bonds, and 15% in short-term U.S. Treasury or related securities.

Hedging Allocation: The Index rules define hedging decisions as the purchase of U.S. Treasury or related securities and the sale of the Index investment portfolio.

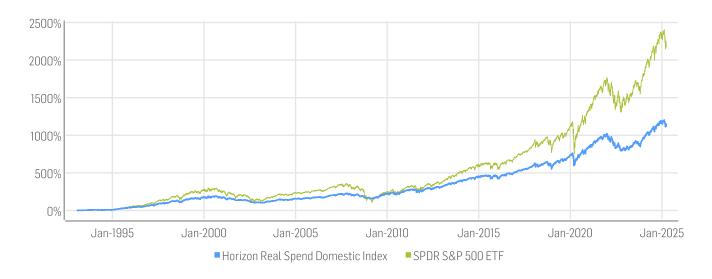

Un-Hedging Allocation: The Index rules define un-hedging decisions as the sale of U.S. Treasury or related securities and the purchase of the Index investment portfolio.

Intelligent Rebalance: Following negative quarterly returns, 1.25% less is allocated to the spending reserve with a minimum allocation of 5%. Following positive quarterly returns, 1.25% more is allocated to the spending reserve with a maximum allocation of 15%.

The content is provided on an "as is" basis. Solactive AG accepts no responsibility or liability for any errors or for any loss from use of this factsheet or any of the information or data contained herein. In no event shall Solactive AG be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs) in connection with any use of the factsheets and its content even if advised of the possibility of such damages.

It is not possible to invest directly in an index. Exposure to assets represented by an index is available through investable financial instruments that seek to provide an investment return based on the performance of an index. A decision to invest in any such financial instrument should not be made in reliance on any of the statements set forth in this document. Prospective investors are advised to make an investment in any such financial instrument only after carefully considering the risks associated with investing in such financial instruments, as detailed in an offering memorandum or similar document that is prepared by or on behalf of the issuer of the financial instrument or vehicle.

The financial instruments are not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Index and/or Index trade mark or the Index level at any time or in any other respect. Solactive AG makes no assurance that financial instruments based on the index will accurately track index performance or provide positive investment returns. Solactive AG is not an investment adviser and nothing in this factsheet constitutes a recommendation by Solactive AG to invest capital in financial instruments nor does it in any way represent an assurance or opinion of Solactive AG with regard to any investment in a financial instrument. Inclusion of a security within an index is not a recommendation by Solactive AG to buy, sell, or hold such security, nor is it considered to be investment advice.

The index is launched on 31-Jan-1993. All information, including index levels, provided for any date or time period prior to the launch date is back-tested. Back-tested performance is not actual performance, but is hypothetical. The back-test calculations are based on the same or fundamentally the same methodology that was in effect when the index was launched. A back-test calculation means that no actual investment which allowed a tracking of the performance of the Index was possible at any time during the period of the back-test calculation and that as a result any comparison is purely hypothetical. The methodology and the model used for the calculation and back-test calculation of the Index were developed with the advantage of hindsight. In reality, it is not possible to invest with the advantage of hindsight and therefore this performance comparison is purely theoretical.

Past performance should not be considered as indication or guarantee of any future results. Charts and graphs are provided for illustrative purposes.
